

The "Broadcast Flag" proposal will effectively make it illegal for me to do many things with my personal computer, IN MY HOME, that are perfectly legitimate uses of my own technology. If I want to use my computer as a radio, or as a TV, then so be it. The government should NOT be allowed to stipulate how I use my computer, especially when it's my own system in the privacy of my home. I am not doing anything even REMOTELY illegal, and would like to continue to view myself in that light. This sets a dangerous precedent.
